Biophys. Acta 1129:335-338(1992).
FUNCTION: INHIBITOR OF PANCREATIC RNASE AND ANGIOGENIN. MAY ALSO FUNCTION IN THE MODULATION OF CELLULAR ACTIVITIES.
SUBGUNIT: FORMS A TIGHT ONE-TO-ONE COMPLEX WITH THE RNASE.
SUBCELLULAR LOCATION: Cycoplasmic.
SUBCELLULAR LOCATION: Cycoplasmic.
TISSUE SPECIFICITY: BRAIN, HBART, LUNG, LIVER, SPLEEN, TESTES ANI
KIDNEY, HIGHEST IN THE LUNG AND LOWEST IN THE HEART.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SIMILARITY: Contains 15 leucine-rich (LRR) repeats.

J. Biol. Chem. 275:18418-18423(2000).

-:- FUNCTION: Transcriptional corepressor that binds to a number of transcription factors. Inhibits the transcriptional activation mediated by CTNNB1 and TCF family members in Wnt signaling. The effects of full-length TLE family members may be modulated by association with dominant-negative AES (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Wang

SUBCELLULAR LOCATION: Nuclear.
SUBCELLULAR LOCATION: Nuclear.
TISSUE SPECIFICITY: Highly expressed in adrenal gland, intestine, kidney, lung, ovary and thyroid. Detected at levels in pituitary, hippocampus, cortex, cerebellum an INDUCTION: By kainic acid in the dentate gyrus.
SIMILARITY: Contains 7 WD repeats.
SIMILARITY: BELONGS TO THE GROUCHO/TLE FAMILY OF WD-REF
                                                                                                                                                                                                                                                                                                                                                                s SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nucleic Acids Rés. 29:1410-1419(2001).

-!- FUNCTION: Transcriptional corepressor that binds to a number of transcription factors. Inhibit the transcriptional activation mediated by CTWNB1 and TCF family members in Wnt signaling. The effects of full-length TLE family members may be modulated by association with dominant-negative AES (By similarity). May planscript that the signal sign
                                                                                                                                                                                                                                                                                                                                                                                               the European Bioinformatics Institute. Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
